

SPRINTZEAL ISO 22317 BUSINESS IMPACT ANALYSIS TRAINING - COURSE AGENDA

Course Agenda

Course Overview

Sprintzeal's ISO 22317 Business Impact Analysis training course is designed for professionals in risk management, business continuity, disaster recovery, and organizational resilience. It provides knowledge and best practices for conducting effective Business Impact Analysis (BIA) based on ISO 22317 guidelines. Participants gain practical experience, identify business continuity requirements, set recovery timeframes, and determine restoration steps.

Learning Objectives

- Understanding the core elements of a Business Impact Analysis (BIA) process.
- Mastering BIA approaches, methods, and techniques.
- Implementing the ISO 22317 standard for effective BIA design, implementation, and maintenance.
- Strengthening organizational resilience by identifying business continuity needs, understanding stakeholder requirements, and ensuring legal compliance.
- Enhancing competence in analyzing vulnerabilities, risks, and potential consequences through BIA.
- Determining realistic recovery time objectives and recovery point objectives based on BIA findings.
- Developing strategies for mitigating risks identified through BIA.

ISO 22317 Course Outline

- **Module 1:** Fundamental principles and concepts of a Business Impact Analysis (BIA)
- **Module 2:** BIA tools and techniques
- **Module 3:** Role of the BIA in the Business Continuity Management lifecycle

Conclusion

Sprintzeal's ISO 22317 Business Impact Analysis course offers a structured approach to understanding and implementing BIA in business continuity management. Participants learn to identify critical business functions, assess impacts, analyze vulnerabilities, and communicate findings effectively. The course includes practical exercises and exam preparation.
